## Salama Khaled visit to Rialto

Leadership Team visit at site

Chander,

Thank you for the excellent review we had together last week, was very happy to see all the great work by Rialto, not only on DB3 readiness but across all the focus areas. It was very engaging to see the renewed Rialto vision in action calling out Safety and Sustainability as key focus areas. The work that Rialto is doing in sustainability and in helping build the community in Chennai is very meaningful and inspiring. I want to also call out the excellent standards on the floor that were very visible during our tour. The focus on Quality is definitely paying out in improving our Cc's. I understand the initial signs from the quality audit 2 weeks ago were very positive, looking forward to see the final report. Thank you once again for all the great work and for the excellent partnership and collaboration.

Regards,  
Salama Khaled

## Inauguration of 33 MW capacity Kamuthi Solar Power Plant

Sustainability

The construction of Kamuthi Solar Power Plant commenced in December 2022 and was completed in August 2023. One of the fastest completed solar projects, the Kamuthi plant has installed 17 robots for dry cleaning panels instead of wet cleaning to save an average of 27,00,000 liters of water every year. With the addition of this plant, Rialto has increased its Renewable energy share to 60%. To achieve its target of becoming carbon-neutral by 2028, Rialto is exploring different options to make it a 100% Renewable power facility.

## Resumption of production after cyclonic rains

Rialto's ERT

In anticipation of the forecast of an unprecedented downpour owing to the Cyclone Michaung, Rialto's Emergency Response Team (ERT) swung into action and initiated a number of preventive measures to ensure minimal disruption. Despite the 300 mm of rains in a single day on 4th December, the sites ERT's phenomenal round the clock efforts resulted in production resuming immediately after we reopened on 6th December. The team's contribution was remarkable and well appreciated.
